

THE BODY COMPASS

How to Use Your Physical Sensations as a Guidance System for Life

Author	Gaynor Kim-Sing, Global Stewardship Council

Best for	Anyone told they are 'too sensitive' · Those wanting to make decisions from embodied wisdom · Practitioners and decision-makers

Credit and Origin

The core teachings in this document — flow codes as vibrational states of optimal experience, sensitivity as a superpower, and the body as a calibration instrument — are adapted from Jarrad Hewitt's teaching as shared in The Flow Codes 3-Day Experience, Day 1, published May 2026:

https://www.youtube.com/watch?v=s_j83nzK1YI

The term 'Flow Codes' is Jarrad Hewitt's. It is used here with credit. The principles have been translated into secular, universally accessible language. The synthesis and integration with the Global Stewardship Framework is the work of Gaynor Kim-Sing.

Executive Summary

Your body is not just a vehicle for your mind. It is a sophisticated guidance system — a compass that signals, through physical sensation, what is in alignment with your well-being and what is not.

Most of us have been trained to ignore these signals. We override fatigue with caffeine. We suppress gut feelings with logic. We numb tension with distraction. We dismiss sensitivity as weakness.

This document offers a practical framework for reclaiming your body's wisdom. It is grounded in the science of interoception — the capacity to sense internal bodily states — which research shows is foundational to emotional regulation, intuition, and decision-making.

The core insight: your body knows before your mind does. Learning to listen to its signals — and to calibrate your choices accordingly — is one of the most practical skills you can develop. This is not a mystical claim. It is physiology.

Section 1: Your Superpower Is Your Sensitivity

1.1 The Reframe

Many people — especially those drawn to inner work — have been told they are ‘too sensitive.’ They feel things deeply. They pick up on others’ emotional states. They are easily overwhelmed by loud environments, crowds, or conflict.

This sensitivity is often pathologised. It is seen as a weakness to be overcome, a flaw to be hardened against. The reframe this document offers is different:

Your sensitivity is not a liability. It is a finely tuned instrument. The same capacity that makes you vulnerable to overwhelm also makes you capable of deep empathy, accurate intuition, and precise discernment. The goal is not to become less sensitive. The goal is to learn how to calibrate your instrument so it serves you rather than overwhelms you.

THE OLD STORY	THE NEW STORY
I am too sensitive. I need to toughen up.	My sensitivity is a gift. I need to learn how to calibrate it.
I pick up on everyone’s emotions and it exhausts me.	I can sense subtle states. I need discernment: what is mine and what is not?
I can’t handle loud or crowded environments.	My nervous system gives me clear feedback about what supports or depletes me.
I wish I didn’t feel things so deeply.	My depth of feeling is my capacity for depth of connection, creativity, and wisdom.

1.2 Practice: The Sensitivity Reframe

When you notice yourself judging your sensitivity, pause and remind yourself:

*“This sensitivity is not a flaw. It is an instrument.
I am learning to play it.
The same sensitivity that makes me vulnerable to overwhelm
makes me capable of profound connection and insight.
I do not need to become less sensitive.
I need to become more skilled.”*

Section 2: The Body as Compass — Learning the Signals

2.1 The Principle

Your body communicates through sensation. Expansion, warmth, lightness, and openness generally signal alignment — this person, this choice, this environment is supporting your well-being. Contraction, tightness, heaviness, and unease generally signal misalignment — something here needs attention, a boundary, or a different choice.

This is not a perfect system. Past trauma can cause contraction in genuinely safe situations. Old patterns can cause expansion toward familiar but unhealthy choices. The body compass must be used with discernment, not as an infallible oracle. But with practice, it becomes increasingly reliable.

2.2 The Body Compass Signal Guide

SIGNAL	WHAT IT MAY INDICATE	WHAT TO DO
Expansion — warmth in the chest, relaxed breathing, openness, lightness, or quiet ease	Alignment. This person, choice, or environment is supporting your well-being.	Move toward it. Explore further.
Contraction — tightness in the gut or chest, shallow breathing, heaviness, or unease	Misalignment. Something here needs attention, a boundary, or a different choice.	Pause. Investigate. Do not override.
Neutral — no strong signal either way	This may be fine, or you may not yet have enough information.	Gather more data. Check again later.
Confusion — mixed signals, expansion and contraction together	Something here is partly aligned and partly not.	Discern. What part expands you? What part contracts you?
Numbness — no signal at all	You may be dissociated, exhausted, or overwhelmed.	Regulate first (slow breathing, grounding). Then check again.

2.3 Practice: The Daily Body Check

Three times a day (morning, midday, evening), take 30 seconds:

1. Pause. Take one slow breath. Close your eyes if comfortable.
2. Scan your body from head to toe. Where do you feel expansion? Where do you feel contraction?
3. *Ask: “What is my body telling me right now? What needs attention? What needs release? What needs appreciation?”*
4. Make one small adjustment based on what you find.

Section 3: Calibration Over Control

3.1 The Principle

Much of our suffering comes from trying to control outcomes rather than calibrating our state. Control says: 'I must make this happen exactly as I envision it.' Calibration says: 'I will bring myself into alignment with what I want to experience, and act from there.'

Calibration is not passive. It is an active, ongoing process of adjusting your inner state — your thoughts, your emotions, your body — to align with what you want to experience. It is the difference between forcing a door open and becoming the key that fits the lock.

3.2 The Calibration Practice

STEP	ACTION
1. Identify the desired state	What quality do you want to experience more of? Peace? Clarity? Connection? Creativity? Name it.
2. Find the body signature	When have you felt this quality before? What did it feel like in your body? Where did you feel it?
3. Recreate the signature	Breathe into that part of your body. Recall the memory. Let the sensation return, even faintly.
4. Act from the state	From this calibrated state, take one action. Do <u>not</u> act from urgency. <u>Act from alignment</u> .
5. Check the feedback	After acting, check your body. Did the action feel expansive or contractive? Calibrate again as needed.

Section 4: Flow States — Accessing Optimal Experience

4.1 The Principle

Flow states are moments of full immersion — time dissolves, self-consciousness fades, action feels effortless. Athletes call it 'the zone.' Jarrad Hewitt calls these 'Flow Codes' — specific vibrational states that unlock optimal experience. Flow is not random. It can be cultivated. The body compass is the entry point.

4.2 The Flow State Entry Practice

STEP	ACTION
------	--------

1. Identify a flow activity	What activity reliably brings you into flow? Writing? Moving? Making music? Being in nature?
2. Notice the body signature	Just before or during flow, what does your body feel like? Where is the expansion?
3. Use the signature as a trigger	Before beginning, spend 60 seconds recreating that body signature of flow. Do not skip this step.
4. Begin	Start the activity. Do not force. Let the calibrated state carry you.
5. Reflect afterward	What supported flow? What disrupted it? Build your personal flow map over time.

Section 5: Boundaries as Calibration

5.1 The Principle

Your body compass is also your boundary system. When you feel contraction around a person, a request, or an environment, that contraction is information. It may be saying: this is not for me. I need to say no. I need to speak up. I need more space.

Healthy boundaries are not walls. They are calibrated proximity — adjusting how close you are to something based on what your body tells you is nourishing or depleting. The body compass makes this precise rather than reactive.

5.2 The Boundary Check

When someone asks something of you, or you are considering entering a situation, pause and check your body:

BODY SIGNAL	RESPONSE
Expansion — this feels right	Say yes, or move toward it. Trust the alignment.
Contraction — this doesn't feel right	Say no, or ask for time: "Let me check and get back to you."
Confusion — mixed signals	Ask clarifying questions. Gather more information. Check again in an hour.
Numbness — no signal	Regulate first. You cannot navigate from a dissociated state.

Section 6: Connection to the Global Stewardship Framework

FRAMEWORK DOCUMENT	HOW THE BODY COMPASS SUPPORTS IT
1. GSC Charter	Leaders who listen to their body compass make decisions from integrated wisdom, not just abstract analysis
2. Consciousness & Safer AI Design	The body compass is a pre-AI check: am I in coherence before I engage this tool?
3. The Ancestral Dimension	Inherited trauma patterns often manifest as persistent body sensations; the compass helps identify and name them
5. GSC RevCon Full Submission	Diplomats and negotiators with body awareness detect misalignment in high-stakes rooms before it becomes crisis
9. The Mirror Model	Peer support practitioners use the body compass to track their own reactions during sessions, preventing projection
10. The Narrative Shift	The body compass makes the new story felt, not just thought: sensitivity as superpower is lived in the body
11. The Field of Connection	The body compass detects the felt sense of relational coherence — the field as experienced from the inside
12. The Heart's Compass	The body compass is the somatic dimension of the Heart's Compass — emotion and sensation working as one system
13. The Unified Self	The body compass integrates mind, emotion, and soma into a single guidance system — the unified self in practice
14. The Relational Fire	The boundary check in Section 5 is the Relational Fire made somatic — staying present while honouring your limits
15. The Story We Choose	The body compass is the felt experience of the new story — calibration rather than control, from the inside out

Section 7: A Daily Practice

At three points during the day — morning, midday, evening — take 30 seconds:

1. **Pause.** One slow breath. Close your eyes if comfortable.
2. **Scan.** Where is expansion? Where is contraction?
3. **Ask:** *“What is my body telling me right now?”*
4. **Adjust.** Make one small calibration based on what you find.

*"Your body is not an obstacle to your growth.
It is the instrument of it.
Every sensation is a signal.
Every contraction is information.
Every expansion is an invitation.
You are not too sensitive.
You are exquisitely calibrated.
Learn to read the signals*

The tools are free. The science is clear. The compass is within you. The choice is yours.
